Figure Types

Figure type is the shape of the body which is also referred to as the natural silhouette. This is identified by the skeletal structure and the quantity and distribution of muscle and fat on the body. Bodies come in all different shapes and sizes, hence we are all a little bit different. Most body shapes can be categorized into five broad types and are named after shapes such as, rectangle, triangle, oval and hourglass.

Here are the five major figure types

| Figure Types | Characteristics |
|---|---|
| (1) Rectangle (also known as Straight or Banana) | <ul style="list-style-type: none">▪ The bust and hips are basically the same size (balanced)▪ The waist is slightly smaller than the bust and hips (undefined)▪ Not many curves▪ Straight hips and bottoms▪ Well aligned shoulders and hips |
