

# Sampling using the non-probability method

Non-probability sampling is a sampling technique where samples are gathered in a process that does not give all the individuals in the population an equal chance to be selected. For more information on non-probability sampling [Click Here](#)

<https://explorable.com/non-probability-sampling>

## Non-probability Sampling

- Non probability sampling does not involve *random* selection
- Accidental or Purposive

*Non-Probability sampling the selected population often based on accessibility and personal judgement of the researcher.*

The slide share below looks at non-probability sampling.
