

Tabular

Introduction:

Tabular is a table used in data presentation. The process of tallying and placing classified data into tabular form is known as tabulation. This form of data presentation is used to tally data that has been collected from sources such as questionnaires and observation. Often times, tabulations are used to create graphs and bars.

Below are samples of tabulations.

Table 7.3 : Age Distribution of the Students

Age group	Male children		Total (A)	Female children		Total (B)	Grand total (A+B)
	Residents	Non-residents		Residents	Non-Residents		
3—5	4	8	12	4	4	8	20
5—8	3	3	6	2	1	3	9
8—10	3	3	6	2	2	4	10
10—12	4	0	4	2	1	3	7
12—15	3	1	4	0	0	0	4
Total	17	15	32	10	8	18	50

Number of plants survived	Tally Marks	Number of schools (frequency)
20 - 29	III	3
30 - 39	IIII II	14
40 - 49	IIII II	12
50 - 59	IIII	8
60 - 69	IIII II III	18
70 - 79	IIII	10
80 - 89	IIII II III III	23
90 - 99	IIII II	12
Total		100

EXAMPLE: Frequency distribution of injury type at a workplace

Injury Type	Frequency	Percent
Fall	14	30
Cut	8	17
Burn	3	6
Back injury	2	4
Other trauma	11	23
Injury not specified	9	19
TOTAL	47	100

The SlideShare presentation below, in detail, explains the different types of tabulation and provides example.
