

Presentation and discussion of findings

The findings in a research are very important. For Caribbean studies, pupils are not only expected to present the data, but also analyse the data to find patterns, trends or exceptions and discuss the findings. The discussion of findings should not only relate to the purpose of the investigation but also make comparisons with previous research done on the topic. The significance of research will also be in the discussion of findings. Furthermore the conclusions and recommendations of the research will also be based on the findings. [Click Here](#) for more information of the presentations of findings.

SUMMARY OF FINDINGS

- This describes the problem, research design, and the findings (answer to the questions raised). The recommended format is the paragraph form instead of the enumeration form.
- For each of the problems, present:
 - The salient findings,
 - The results of the hypothesis tested
