

# Processes Related to Limestone Environments

**Introduction:** Limestone environment is used synonymously with the term Karst topography. This really refers to landscapes formed as a result of the dissolution of soluble rocks, such as limestone rock or gypsum.

Many countries in the Caribbean are made up limestone and as a result karst topography or karst landscapes are dominant and present. Some are actually tourist attractions. Can you think of any in your country?

## Concepts Relating to the Rivers and Drainage Basin

**Introduction:** As we continue to study hydrological, fluvial and coastal environments, there are other related concepts which have to be studied.
