

Natural Hazards

As defined previously a natural hazard is a threat of an event. Below is a list of hazards, both natural and man-made. For the purpose of this course, hazards are grouped under four main headings: **technological, tectonic, climatic and geomorphological**. Are you able to classify the hazards on the list provided under the four broad themes?

Natural	Man-made
Earthquakes	Terrorist attacks
Hurricanes	Violence
Floods	Explosions
Blizzards	Accidents
Tornadoes	Chemical spills
Fires	
Tsunamis	
Severe storms	
Landslides	
Medical emergencies
