

Population Control

Introduction:

A population grows when the birth rate exceeds the death rate.

PROBLEMS ASSOCIATED WITH OVERPOPULATION

Lack of space and natural resources: this may lead to

1. Homelessness
2. Food shortage resulting in famines, starvation and death.
3. Crime and violence
4. Low life expectancy

REDUCING OVERPOPULATION

1. Decreasing birth rate
2. Increase food supply
3. Conserving resources
